

Applied Research Project – Progress Report 5

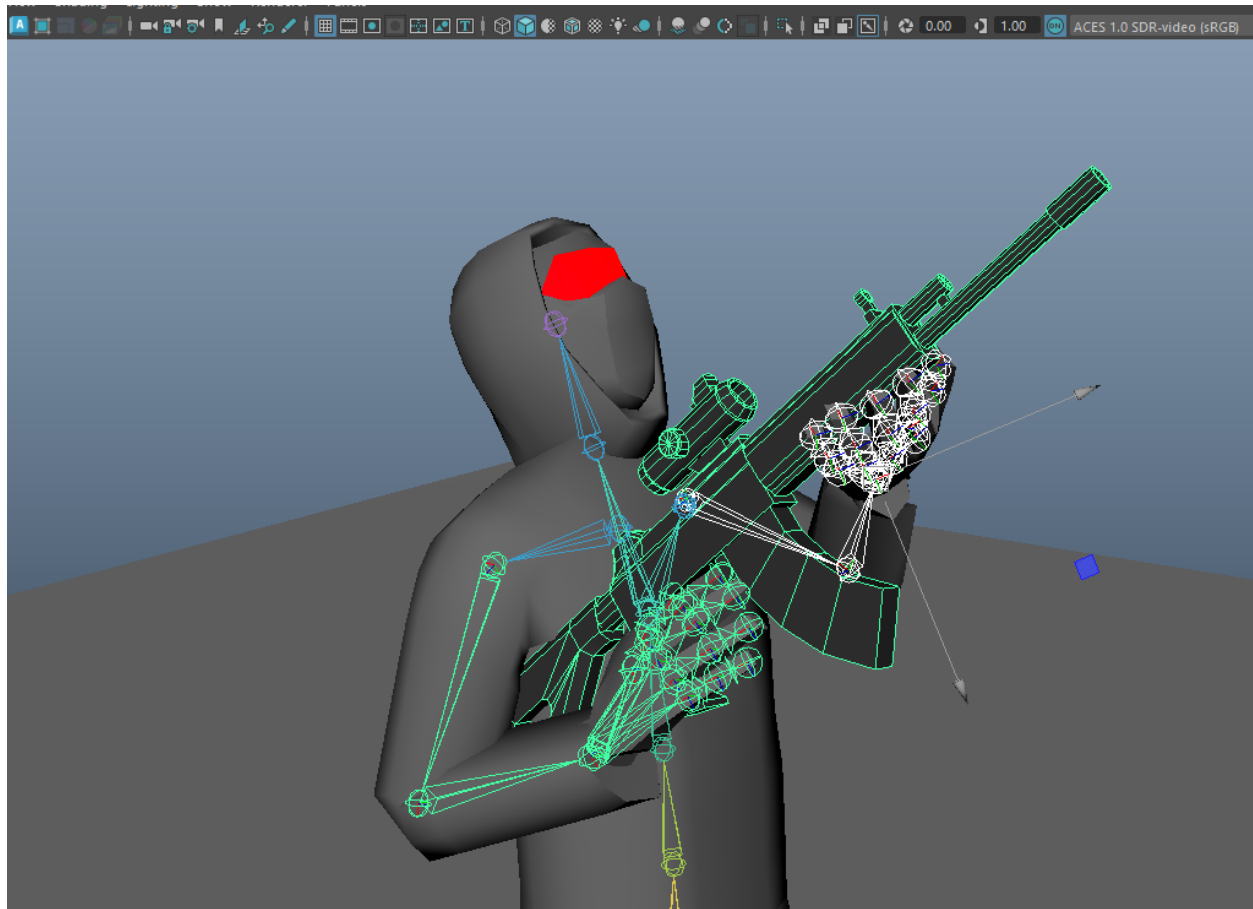

Time Log:

Date	Number of Hours	Description of work done
Nov 10, 2025	4	Output txt, record the player names, using vehicle, JoinTime, leaveTime, PlayDuration.
Nov 11, 2025	4	Output txt, record the IsWin condition, DamageGet. Tried to transfer data from projectiles to their owner tanks to get the Hit targets for KillCount and DeathCount.
Nov 12, 2025	6	Redo the data transfer for KillCount and DeathCount. It also saves data in the player controller but costs too much time on finding its real local controller with projectiles and the owner then hits the target.
Nov 14, 2025	5	Fixed the healthbar in the client widget (UI/ UX); Add children blueprint for different shells, then adjust damage values.
Nov 15, 2025	4	In order to reduce the budget for rendering (for the possible to run in our lab computers), I need to remove the free online art assets. Pistol meshes in maya.
Nov 16, 2025	5	Pistol mesh rigging, input to unreal editor; Rifle meshes in maya.
Nov 17, 2025	6	Rifles rigging; a trooper mesh.
Nov 18, 2025	4	Rigging for the trooper.
Nov 19, 2025	5	Trooper's animation: Unarmed, Pistol, Rifle in (idle, walk, run)
Nov 21, 2025	4	Trooper's animation: Unarmed, Pistol, Rifle in (crouch)

Description:

In the past two weeks, I had finished all the output txt that other teammates needed. Then I fixed the UI/UX bug and made all the art assets as much as I could to reduce the rendering budget (this also could help me to know all the processes, all domains to make a game).

Next, to do:

1. Finish all the animations for troopers Nov 24th.
2. FX for shells and a flaming fire for the nod tank.
3. Level design, make a playable level for demo shows.
4. Before the presentation, there are 3 bugs need to fix:
 - a. Barrel/ Turret shaking.
 - b. weapon floating in air when a player just drives a tank
 - c. Tanks collision issue (some of the hits cannot damage a tank)
5. SFX, some sound (for example: footstep) needs to be recorded.
